JOB MARKET PAPER

“Dollar Invoicing and the Global Financial Cycle”

I study the dynamic relation between dollar invoicing in exports, dollar borrowing, and the global financial cycle. I document a positive co-movement between dollar invoicing in exports and firms’ dollar borrowing, and also a positive link between dollar borrowing and the VIX. I write down a model consistent with these correlations: during global financial downturns when the VIX is high and dollar liquidity is tight, firms increase dollar invoicing to secure dollar revenues, facilitating dollar borrowing with these revenues as collateral. The model shows that an endogenous increase in dollar invoicing amplifies the responsiveness of dollar borrowing to positive risk shocks (or safety shocks), affecting responses in variables like UIP premium, exchange rates, and net exports. Empirical evidence from a comparison between Turkey and Thailand supports these insights.
